EXPERIENCE

Integra Global Solutions

ML Development Intern

Remote

June 2025 – July 2025

- Built React Native booking, check-in/out, and billing modules with **OCR-based ML extraction** and **human-review fallback**, reducing manual entry from **~8 fields to under 2** and reducing manual corrections by **3x** in production.
- Integrated Firebase real-time sync, offline caching, and analytics for booking/payment flows, reducing sync failures from **30+ per week to under 5** and adding analytics across critical flows.

Fluno

Founding Engineer

Remote

May 2026 – Present

- Worked on **LangGraph-based agentic AI workflows** involving LLM-driven intent detection, slot extraction, state management, tool routing, and multi-step reasoning across conversational automation flows.
- Debugged and evaluated multi-turn agent behavior using **scenario runs, trace logs, and state-transition analysis** to identify incorrect routing, hallucinated slot values, fallback failures, and prompt/state inconsistencies.

PROJECTS

Context-Aware NLP Research Assistant | *Python, LangChain, HuggingFace Transformers, FAISS, Streamlit*

→ <https://github.com/nexxucc/NLP-Research-Assistant>

- Built NLP RAG pipeline using LLMs to ingest, retrieve, and summarize research papers with FAISS-based semantic search, achieving **sub-second query latency** across **500+ indexed documents** and reducing literature review time by **5x**.

ChandraQuant Siddhanta | *Python, pandas, scikit-learn, Skyfield, NumPy, Matplotlib*

→ <https://github.com/nexxucc/ChandraQuant-Siddhanta>

- Built a Python ML pipeline that predicts **5-day bullish regimes** for NIFTY 50, BANKNIFTY, and SENSEX by combining **31 technical features** with **10 lunar-solar cycle features**.
- Validated on **~15k observations** with temporal splits, crisis-window testing, and a **797-trade** backtest, which returned a success rate of **92.6%**.

Drone-Based Cell Signal Mapper | *Python, pyrtlsdr, pymavlink, Raspberry Pi*

→ <https://github.com/nexxucc/CellSignalMapper>

- Developed autonomous LTE coverage mapping system integrating RTL-SDR RF scanning, Pixhawk MAVLink GPS telemetry, and Raspberry Pi-based signal logging with **Google Earth heatmap** visualization.

AI Shopify Creator | *React, Express.js, n8n, LLM agents, PostgreSQL, Redis, Docker*

→ <https://github.com/nexxucc/ai-shopify-creator>

- Orchestrated self-hosted n8n workflows and **5 LLM agents** to generate complete Shopify stores, with React + Vite dashboard, Express API, and Docker Compose infrastructure reducing store creation from hours to under **3 minutes**.

TECHNICAL SKILLS

Languages: Python, JavaScript, C/C++, Java, Bash, SQL

Web: React, Next.js, Node.js, Tailwind, Firebase, MongoDB, SQLite

AI/ML: LangGraph, LangChain, RAG, PyTorch, TensorFlow, Scikit-learn, Pandas, NumPy

Tools: Git, VS Code, Linux, Power Bi, Excel

Cloud/DevOps: AWS, Docker, Kubernetes, Gitlab, CI/CD pipelines, Terraform

ACHIEVEMENTS

Paytm Ideathon 2026 | *Winner - Identified and solved challenges in digital payments.*

Scribble Pad Hackathon | *Third prize – Developed computer-opponent Othello game in JavaScript*

Tech Member, GDG VIT Chennai, 2023-2025

Member, Projects Department, Robotics Club, 2024-2026

EDUCATION

Vellore Institute of Technology

B.Tech, Computer Science and Engineering

Tamil Nadu, India

August 2023 – May 2027
